Indications for Use

The Designs for Vision® LED DayLite® WireLess™ is a lightweight, frame mounted headlight that is designed for general illumination in laboratory settings.

Device Description

The Designs for Vision® LED DayLite® WireLess™ provides bright, portable light to the laboratory environment. The headlight is designed to clip onto a wide variety of frames. It is powered by a lithium ion battery and generates a 3” spot of light at a 12 inch working distance. The light has a correlated color temperature of 5800˚K and a maximum intensity of 40,000 lux. The unit can run on battery power for approx. 100 minutes before needing to be recharged.

The LED DayLite® WireLess™ consists of the following:

LED Headlight
Three Battery Pods
Smart Charging Cradle
AC Power Cord
UV/Blue Light Filter
T-Mount Bracket (*sold separately*)
Color Coded Bands
Operation Manual
Warranty Card

Always examine the unit and accessories for damage before commencing use. Damaged accessories must not be used and must be replaced. Use original Designs for Vision, Inc. parts and accessories only. The use of unapproved parts may void the warranty.

**Device Diagrams**

Your LED DayLite WireLess is designed to be simple and lightweight. It consists of an LED Headlight, Battery Pods and a Charging Cradle.

*NOTE: The UV/blue light filter (not shown) comes attached to the LED Headlight, but is removable.* The following diagrams identify each part for your reference in this manual:
Directions for Use

Charging the Battery Pods

Remove the components from the shipping container, checking that all parts on the packing list have been received. Carefully remove the headlight, battery pods, charging cradle and AC power cord from the packaging carton.

The charging cradle is designed to meet multi-national regulatory requirements and has multi-input voltage capability to accommodate various line voltages from 100-240 VAC. The battery pods are to be charged with the supplied charger only.

Plug the AC power cord into the charging cradle and connect to an AC outlet. **Note: International plugs are available through Designs for**

**FIG. 3**
Vision; refer to the list of part numbers on page 13. You can now flip the power switch on the back of the charging cradle to turn on the power. You should notice two pulsing BLUE lights on the battery indicators, which show that the charging bays are ready to charge (Fig. 3). Screw two battery pods firmly into the two charging bays all the way down (Fig. 4). The BLUE lights should now turn off and YELLOW indicator lights should start flashing. Once the charge cycle has begun, the lights will illuminate RED and display the current state of charge. When the batteries are finished charging, (approx. 60 mins), the LEDs should all light up GREEN.

You can now
remove the battery pods from the charging cradle.

**Using the Headlight**

Place the LED headlight onto the t-mount bracket for your frame. Take a charged battery pod and screw it *firmly* down onto the LED headlight. *NOTE: Make sure to remove dust plug before installing battery pod. Do not apply excessive force when installing battery pod.*

Your LED DayLite WireLess uses a capacitive touch switch to control the light. The indicated area shows where you can touch (Fig. 5). Touch the silver band once to activate the light. The light will turn on at its highest intensity. If you touch the band a second time, the light will reduce to medium intensity. The light will deactivate the third time you touch the silver band. *Note: Make sure*
the capacitive touch sensor is not making contact with other items when in use.

The LED DayLite Wireless also includes a Low Battery Warning. At approximately five (5) minutes remaining, the headlight will flash three times. This will continue once each minute until the headlight shuts off.

The headlight can be adjusted up and down to align with your point of view. NOTE: Move only the headlight to make adjustments. Do not grab battery pod to make adjustments to headlight position.

A UV/blue light filter is provided to prevent premature curing of dental composites. To use, slide the filter over the front of the headlight until completely seated. Tighten the set screw on the bottom of the filter to properly secure to the headlight. You can now flip the UV/blue light filter in and out of the path of light as required.
Understanding the Charging Cradle

Your LED DayLite WireLess comes with a rapid-charge smart battery monitoring system. This feature will check the health of your battery as well as indicate when it needs to be replaced. The Battery Status indicators can display messages according to the following chart:

<table>
<thead>
<tr>
<th>Battery Status</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>POWER ON</strong></td>
</tr>
<tr>
<td></td>
<td><strong>WAITING TO CHARGE</strong></td>
</tr>
<tr>
<td></td>
<td><strong>REPLACE BATTERY</strong></td>
</tr>
<tr>
<td></td>
<td><strong>BATTERY OVERHEAT</strong></td>
</tr>
</tbody>
</table>

- **POWER ON**: Indicates that power is on to the charging bay
- **WAITING TO CHARGE**: Indicates that the charge cycle is preparing to start \((NOTE: Typical charge prep is 5 seconds)\)
- **REPLACE BATTERY**: Indicates an error with the battery pod.
  Remove from charging bay and reinstall. If the error continues, discard the battery pod
- **Battery Overheat**: Indicates an overheat condition on the battery. Make sure the charger is in a cool location. If the error continues, discard the battery pod.

*NOTE: Never use a battery pod that continuously gives Replace Battery and/or Battery Overheat indications. Discard in accordance with all regulations and contact Designs for Vision, Inc. for a replacement.*

### Inspection and Preventative Maintenance

- Clean lenses with a standard glass cleaner and a soft, lint-free cloth, making sure not to scratch the surface. It is recommended for disinfection that all the exposed plastic sections of the headlight be wiped with Lysol IC surface disinfectant/cleaner or an equivalent plastic-safe cleaner. *Note: Do not use alcohol, phenol, ammonia or iodine complex solutions*

- Wipe the sections rather than spraying onto plastic parts. *Note: Do not let liquids enter openings or ports. Do not immerse parts in solutions. Using solutions other than recommended may void warranty. Allowing liquids to enter openings or ports may void*
Battery Pods should be replaced every 12 months to ensure proper operation.

NOTE: Do not Autoclave

NOTE: For indoor use only

NOTE: Disposal of the equipment and the accessories at the end of their useful lives should be in accordance with all national and local regulations

NOTE: If the equipment is used in a manner not specified by Designs for Vision, Inc., the protection provided by the equipment may be impaired.
