

POLITZER FULL DIAMETER AND BIOPTIC

GENERAL

The Politzer series was developed to maximize the size of the exit pupil. To achieve this, the eye lens is made to be the same size as the objective. This design will afford the patient's eye more room to roam through the viewing field thereby reducing eye strain. This series includes Full Diameter, Bioptic and Micro Spiral designs.

The Full Diameter and Bioptic designs are available in black, brown or silver housings and as with all of our telescopes, reading caps are available in any power.

FITTING

Depending upon how the telescope is mounted, the previous fitting instructions for [Full Diameter](#) or [Bioptic Telescopes](#) would apply here as well.

POWERS AVAILABLE

Full Diameter: 1.7X Rectangle, 1.7X Round

Bioptic: 1.7X, 2.2X, 3.0X

1.7X Politzer Telescope
mounted in Bioptic Position
in the Titanium 062 frame
